

STAIR CLIMBING TROLLEY

Alternative names:

Category Stair climbing trolleys

A stair climbing trolley is an electric trolley that can be used to transport heavy products up and down stairs when receiving, distributing and delivering products from the stockroom to the shop area. A stair climbing trolley can be used to transport items such as domestic appliances, kitchen units, computers, TVs, cupboards, and similar.

Benefits

- Possible to transport several products at one time
- Easier and less strenuous to transport products up or down stairs
- There are many different types and models of stair climbing trolley on the market, so you can choose the type best suited to the types of products and tasks at hand

Requirements for use

- The stair climbing trolley should be suited for the product and task at hand, for example with regard to design and capacity
- Stairs and transport routes, including floor and ground surfaces, and cars where relevant, should be suited for transport with stair climbing trolleys
- There should be a charging point for charging the stair climbing trolley
- Users must be over 18

Considerations prior to procurement

- What do we need a stair climbing trolley for? Do we need it for transport at the shop and/or when distributing goods to customers?
- Can we use a stair climbing trolley for the specific types of items we need to handle? Are the items of a size, shape, weight and condition, for example, that allow for safe transport using a stair climbing trolley?
- What stair climbing trolley is best suited for the tasks we want to use it for and for the people who will be operating it? For example, with regard to technical aspects, design, size, weight, capacity, manoeuvrability, etc.?
- Can we use a stair climbing trolley in the areas where we want to use it? Are our physical surroundings suited for this type of mechanical aid? For example, stair design, space and accessibility, ground and floor surfaces, car size and design, lighting conditions, etc.?
- How will we charge the stair climbing trolley?
- There may be special requirements for the location of a charger station due to risks of flammable gas emissions - if in doubt, ask the fire authorities

After procurement

- Inspect for deficiencies/defects before use
- Should be maintained as described in the instructions for use
- Employees should be instructed in how and for what tasks the stair climbing trolley should be used
- Make sure the instructions are followed
