

Sack trolley

Alternative names: sack truck, hand trolley, sack barrow

Category Trolleys

Relates to instruction video no.

A4, B2

Sack trolleys are two-wheeled transport trolleys used for moving and transporting various types of loads such as domestic appliances, chairs, sacks and bags, boxes and cases, etc. Sack trolleys can be used for product delivery/distribution as well as in the shop area/stockroom.

Benefits

- Products can be transported rather than carried
- Sack trolleys take up little space and are easy to move and manoeuvre
- There are many different types and models of sack trolley on the market, so you can choose the type best suited to the types of products and tasks at hand

Requirements for use

- The sack trolley should be suited for the product and task at hand, for example with regard to size, load capacity and type of wheels
- There should be room to move and manoeuvre the sack trolley
- There should be room to on- and off-load products in safe working positions
- The surface of transport routes should be even, stable, level and without holes, and the route should be well lit

Considerations prior to procurement

- What do we need a sack trolley for? Where and for what uses and types of product do we need a sack trolley?
- What are our requirements for the design of the sack trolley, for example with regard to size, load capacity, handles, wheels, load ledge or other equipment? For example, do we need a foldable/collapsible model, one with several load ledges, one with pneumatic tyres?

After procurement

- Inspect for deficiencies/defects before use
- Should be maintained as described in the instructions for use
- Employees should be instructed in how and for what tasks the sack trolley should be used
- Make sure the instructions are followed
