

THE BEST WAY TO ... Move heavily loaded pallets long distances

In situations where it is not possible for lorries to park close to the shop/stock delivery point, products may have to be transported for long distances. Therefore, consider carefully the best and safest way to get the pallet into the shop.

The heavier the pallet and the more difficult the transport route, the more you should consider using a powered transport aid.

Keep transport routes clear.

If you are pushing/pulling the load yourself, minimise the number of stops, starts and changes of direction.

REMEMBER TO

- Choose transport aid on the basis of:
 - the weight of the pallet
 - the transport distance
 - the space available for manoeuvring
 - whether the transport surface is uneven/sloping
- Minimise the number of stops, starts and changes of direction if you are pushing/pulling the load yourself
- Keep transport routes clear
