

# MINI LIFTER

## Alternative

---

Category Lift trucks  
Relates to instruction  
video no. D1

---

Mini lifters are hand-operated, small and lightweight lift trucks with battery powered raising and lowering. Mini lifters are suitable for small stockrooms and in shop areas, for example when moving heavy products to or from shelves and from the stockroom to the shop area. Mini lifters can also be used to raise products to a good working height. Mini lifters can be used to handle many different types of loads, such as boxes, rolls, drums, barrels, etc.

### Benefits

- Mini lifters are small and easy to manoeuvre in restricted space, for example
- Allow an easy way to place products at a good working height
- There are many different types and models of mini lifter on the market, so you can choose the model best suited to your products and tasks

### Requirements for use

- The mini lifter should be suitable for the product and task at hand, for example with regard to lifting capacity and lifting range
- There should be room to move and manoeuvre the mini lifter
- The surface of transport routes should be even, stable, level and without holes, and the route should be well lit
- There should be a charging point for charging the mini lifter
- Users must be over 18

### Considerations prior to procurement

- What do we need a mini lifter for, and what lifting capacity and lifting range do we require?
- For what types of product/load do we need the mini lifter?
- What type of lifting gear should the mini lifter be equipped with, for example platform, fork, spike, clutch, turn-and-tilt unit?
- Do we have special requirements for manoeuvrability, for example with regard to floor surface and handling fragile goods?
- Where can we charge the mini lifter?
- There may be special requirements for the location of a charger station due to risks of flammable gas emissions - if in doubt, ask the fire authorities

### After procurement

- Inspect for deficiencies/defects before use
- Should be maintained as described in the instructions for use
- Employees should be instructed in how and for what tasks the mini lifter should be used
- Make sure the instructions are followed
