

THE BEST WAY TO ... Retrieve light products from high shelves

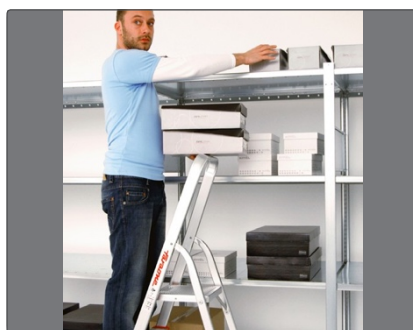

Sometimes, you will need to collect products from high shelves. Use a stepladder in these situations. But remember to always place the stepladder within close reach of the relevant products to avoid reaching out too far or falling.

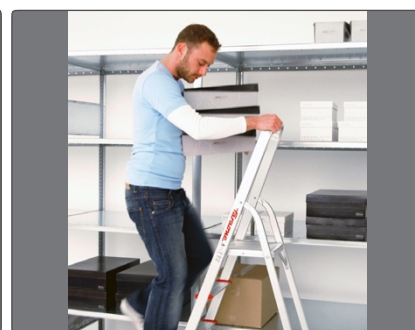

Only pick the products that you can reach without having to fully extend your arm.

Place the stepladder in front of the items you need to collect.

Collect the products that are within easy reach.

Keep one hand free to hold on to the stepladder when you descend.

Stepladder

REMEMBER TO

- Only handle light and easy-to-handle products when using a stepladder
- Properly secure the stepladder and place it on an even and stable surface
- Place the ladder in front of where you need to work
- Only pick the products that you can reach without having to fully extend your arm
